21CP™

Powered by 21st Century Programming

For 20+ years, 21st Century Programming (21CP) has been specializing in the Recycling and Waste business. Our flagship product, the Recycling Operations Manager (ROM) is in operation at over 400 facilities throughout the United States, Canada and Mexico. iTrackBins is part of our continuing evolution as we channel our experience into a truly unparalleled next generation product.

**Effortlessly Track Bins
 With GPS Monitoring
 And Remote Cameras**

iTrackBins Provides Greater Visibility, Security and Profitability for Recycling Companies, Waste Haulers and Scrap Metal Businesses.

iTrackBins is a device whose name describes it perfectly – **it tracks bins**. Companies often have hundreds of bins they struggle to manage with each bin worth up to \$10,000. iTrackBins has a wealth of features like GPS monitoring, A.I. enhanced camera system, Integrated Phone Apps, Dispatching and Scaling systems, iTrackBins provides maximum visibility and improved ROI on every bin.

- ▶ **Automatic GPS Tracking**
Advanced cellular technology coupled with GPS tracking lets the bins track themselves. No more writing the wrong bin number down and spending days trying figure out where everything is.
- ▶ **A.I. Enhanced Cameras**
With integrated artificial intelligence iTrackBins can scan the contents of a bin and let you know how full the bin is remotely. This helps to eliminate empty runs and lets you know when a bin is overloaded or if it contains incompatible materials.
- ▶ **Anti-Theft Security Mode**
Are your competitors picking up your bins? Unlike the competition, our proprietary “Theft” mode with movement detection & smart alerts lets you know as soon as a bin moves when it is not supposed to.

Do You Have “Bin”telligence?

Know Every Bin’s Contents & Location Unbelievable ROI

iTrackBins was designed and developed by recycling professionals who understand the difficulties of the job.

- ▶ **Customizable Configurations**
With “Geofencing” capabilities, our tracking devices know where they are and when to report at all times.
- ▶ **Modular Design**
iTrackBins is built for expansion with the ability to add custom hardware to each device like door sensors, secondary cameras, LED Displays, and more.
- ▶ **Trainable A.I. Features**
iTrackBins provides the ability to input feedback directly into the software to help customize your “Bin”telligence. This allows the software to learn and adapt to each customer’s preferences.
- ▶ **Improved Driver Satisfaction**
One of the biggest chores for drivers is tracking bins. With the iTrackBins device, the device tracks the bins. The drivers don’t have to. No more writing down the wrong bin number. No more searching for and cleaning dirty barcodes. Driver’s drive. iTrackBins tracks the bins.
- ▶ **Replaceable Battery**
We designed iTrackBins with an easily swappable battery that is located on the outside of the bin so that a driver can replace a battery in less than 2 minutes.
